Splitzy

Split bills. Keep bonds.

BRAND IDENTITY + PRODUCT BLUEPRINT

Shared expenses / Personal tracking / Savings projections / Group workflows / PDF reports / Future payment integration

Concept 02 - Split • Product definition v1.0 • October 2026

01 / Brand foundation

Positioning & story

Splitzy is a friendly fintech-style PWA to organize shared costs, understand personal cash flow, and explore savings goals. The interlocking S stands for two sides of a fair split. It is not a wallet, bank or investment adviser in the MVP.

Voice and design principles

- Clear before clever: say exactly who owes whom and why.
- Friendly, never judgmental: money reminders should preserve relationships.
- Trust by design: visible calculations, audit history, explicit confirmations.
- Accessible and global-ready: keyboard navigation, contrast, USD and INR formatting.

Color tokens

Midnight navy	#07152F
Trust navy	#071D49
Splitzy blue	#1677FF
Electric cyan	#37C8F5
Ice white	#F7FAFF
White	#FFFFFF

02 / Logo and component usage

Icon usage

Use the mark without text for app icon, splash, avatars and favicon. Keep clear space around the mark of at least 12.5% of its height. For tiny favicons, use a flat two-color variant without shadows.

Manrope 700/800: brand & headings | Inter 400/500/600: UI & data

03 / Product pillars and personas

A. Shared expenses

Friends, trips, roommates, families and corporate teams. Create a circle, invite members, record costs, split evenly or by amount/percentage/shares, and view balances.

B. Personal money tracker

Record income and spending, categories, recurring expenses, budget caps and monthly summaries. Group reimbursements are transfers, not new income.

C. Savings & investment explorer

Model a flexible monthly or one-time contribution in USD or INR. Compare zero-return savings with illustrative return scenarios; edit contribution, timeline and assumptions.

D. Reports & sharing

Export individual or group statements to PDF. Share through device share sheet, download link, email or WhatsApp after user confirmation.

E. Payments later

MVP marks out-of-app settlements with evidence. Later: connect payment provider for authorization, webhook confirmation, reconciliation and refunds.

04 / Navigation & screen inventory

Global

Welcome, sign in/sign up, onboarding, home dashboard, notifications, profile, settings, help, currency preferences

Groups

Circles list, create circle, invite members, group detail, balances, expense detail, add/edit expense, split editor, activity log, settle up, export PDF

Personal

Overview, add transaction, category breakdown, budgets, recurring rules, transactions history, personal statement

Goals

Savings goals list, goal setup, contribution calculator, projection chart, compare scenarios, goal detail, edit assumptions

Shared services

Search, filters, offline state, sync conflict, empty/error states, consent/privacy, report preview, share confirmation

Later payments

Provider connection, payment method, checkout/authorization, processing, confirmation, failed/refunded/disputed states

05 / Group expense workflow

1. **Choose group type**
   Friends / roommates / family / travel / corporate team; defaults adjust categories and permission rules.

2. **Create a circle**
   Set name, base currency, members and roles; issue invitation links with expiration.

3. **Add expense**
   Enter amount, date, payer, participants, category, notes, optional receipt and currency.

4. **Set split method**
   Equal, exact amount, percentage, weighted shares; validate that allocations total expense.

5. **Calculate balances**
   Net obligations per member, apply already-recorded payments, suggest minimal settlement paths.

6. **Review and settle**
   Record manual payment with evidence, generate PDF, or later use a payment provider.

7. **Audit and revise**
   Keep immutable event history and show edits, reversals, and recalculated balances.

06 / Group rules & corporate teams

Friends & travel

Flexible membership; quick shares; itemized receipts; friendly reminders; mixed payer expense support.

Roommates

Recurring rent, utilities, deposits and household categories; monthly period close; landlord payment is tracked distinctly.

Corporate teams

Workspaces, owner/admin/member/approver roles; department/cost-center tags; approval thresholds; policy violations; read-only auditor; CSV/PDF export.

Multi-currency

Store original currency and exchange-rate snapshot; label conversions; never add USD and INR totals without an explicit rate.

Privacy

Personal transactions private by default; group members see only group entries they are authorized to view; team admins cannot inspect personal spending.

Edge cases

Member leaves group; partial settlement; duplicate expense; offline conflicts; payer excluded from split; refunds; reversed expenses; rounding remainder.

07 / Personal money tracker

Home snapshot

This month income, expenses, net cash flow, budgets remaining, upcoming recurring items and savings contribution.

Transactions

Expense, income and transfer types. Attach receipt, category, merchant/payee, tags and memo. Edits preserve history.

Budget setup

Monthly/category targets and progress; alerts at configurable thresholds; calendar/month selector.

Group reconciliation

A reimbursement or payback is reflected as a transfer, so it does not inflate salary income or double-count spending.

Privacy and export

Private-ledger permissions, local currency, CSV/PDF export, deletion controls and explicit data retention policy.

08 / Savings projection explorer

Inputs & modes

Select USD ($) or INR (Rs); choose one-time deposit or recurring monthly amount; adjust months/years and assumed annual rate. Offer presets (0%, 4%, 8%) as illustrative scenarios, not expected or guaranteed returns. Distinguish cash savings from investment growth.

Projection formula

Monthly contributions made at month end: FV = P * ((1 + r)^n - 1) / r, where P is monthly deposit, r = assumed annual effective rate converted to monthly ((1+R)^(1/12)-1), n is month count. At r=0, FV=P*n. Add any one-time deposit compounded across n months. Exclude fees, tax and inflation unless modeled.

Example: 12 months, monthly deposits, before fees/tax

$100 / month	0%: 1,200	4%: 1,222
Rs 1,000 / month	0%: 12,000	4%: 12,218

These are nominal, hypothetical calculations, not recommendations to invest. Show total contributions separately from hypothetical growth; investments can lose value. Add fee, tax and inflation controls in a later iteration. Avoid “guaranteed savings” language.

09 / PDF reports and future payments

PDF report types

- Group statement: circle, date range, contributors, itemized expenses, split calculation, who owes whom, settlement history, report timestamp.
- Personal statement: cash flow, category totals, budgets, transaction list and applied filters.
- Savings projection: input assumptions, contribution schedule, scenario output and prominent illustrative-only disclaimer.

Share flow

Preview report -> select scope and redact optional personal notes -> export/download PDF -> choose native share (WhatsApp/email/etc.) -> confirm recipients. Avoid public links by default; if links are introduced later, use expiration and access control.

Future in-app settlement workflow

- User selects an outstanding balance and payment provider.
- Show amount, fees (if any), payee and explicit confirmation.
- Provider-hosted authorization; never collect raw card data on Splitzy servers.
- Webhook + idempotency key confirms outcome; pending is not paid.
- Ledger records confirmed settlement; handle failed, reversed, refunded or disputed status.

10 / Data and architecture blueprint

Core entities

User; Workspace; Circle; Membership/Role; Expense; ExpenseShare; Receipt; CurrencyRateSnapshot; Settlement; PersonalTransaction; Budget; RecurringRule; SavingsGoal; ProjectionScenario; Report; Notification; AuditEvent; PaymentIntent (future).

Recommended architecture

- React 19 + TypeScript PWA; accessible design tokens and reusable UI components.
- REST or GraphQL BFF backed by Node/NestJS or equivalent; authorization at resource level.
- Relational transactional data store for balances and immutable ledger events; object storage for receipts and report PDFs.
- Offline-first drafts only; sync once online with clear conflict handling.
- Job queues for recurring expenses, report rendering, reminders and future payment reconciliation.
- Telemetry and tests for split arithmetic, rounding, permissions, exports, and accessibility.

Security controls

HTTPS, secure session cookies, CSRF protections where applicable, rate limits, least-privilege roles, encrypted storage, per-tenant isolation, audit trails, safe file handling and user-controlled data export/deletion. Payment and regulated investment features require separate legal/compliance review.

11 / Roadmap & acceptance checks

Phase 1 - Core MVP

Account, group creation/invites, splits, balance ledger, manual settlements, personal tracking, USD/INR input, static savings projection, PDF reports.

Phase 2 - Collaboration

Recurring expenses, team roles/approval, notifications, multi-currency snapshots, advanced filters, accessible data charts.

Phase 3 - Integrations

Provider settlement, bank feeds only with user consent, reconciliation webhooks, downloadable audit exports, richer financial goals.

Quality gates

All share allocations sum exactly; zero/negative/rounding cases tested; offline drafts do not silently duplicate; private data cannot leak to other circles; PDFs mirror ledger totals; keyboard and screen reader flows work.

Open product decisions

Sign-in options; account geography and currencies; who may invite/edit/delete; corporate reporting format; offline data policy; payment-provider and investment-regulatory boundaries.
